

Certification

Job description of Mr. Ahmad Abdulkarim Sharifa:

Mr. Sharifa joined our Engineering , Maintenance and Reliability Team. His job includes a variety of activities including the following tasks:

-Utility operation including update of the documentation i.e. Process & Instrumentation schemes studying and updating the P&ID for the processes on the site. Also instrumentation drawings of control cabinets.

- Toniatti Centrifughe project: includes vibration and speed sensors for further processing and monitoring the process operation and motor control for reliable and stable operation.

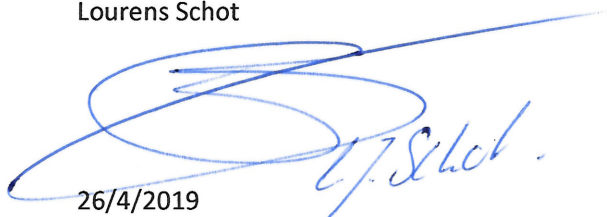

- Micro-reactor project: which involves temperature, flow and pressure sensing and collecting of data for further processing to monitor the process reliability and stability.

-PI System project: Implementation of a Data Historian Package to collect, store, and manage the data from the plant and the processes on site. And he would be the key user for OSIsoft software.

We are fully satisfied with Mr. Sharifa's engineering education background and technical skills.
